

The news box felt separate from the catalog

Antenne and catalog polish · GPT-6 Astra session

Neorgon

The frame was louder than the stories

Use the catalog's own visual language

Local artwork, recognizable update types, quieter framing

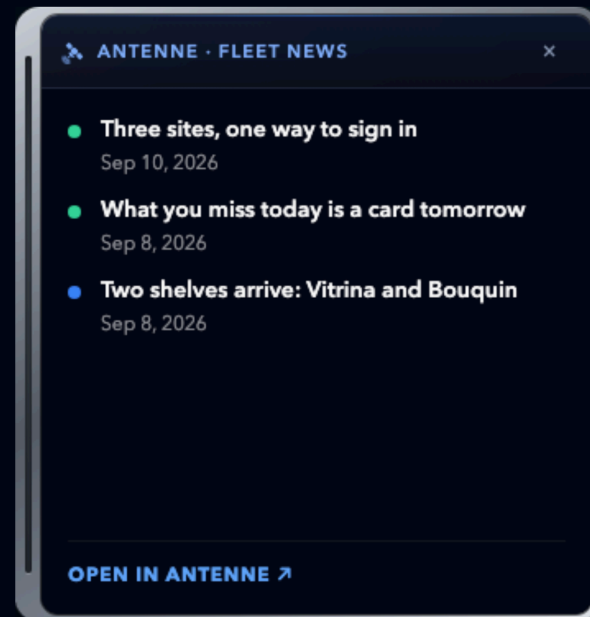

Each story now has a recognizable tool

NEORGON / UI FIELD NOTES

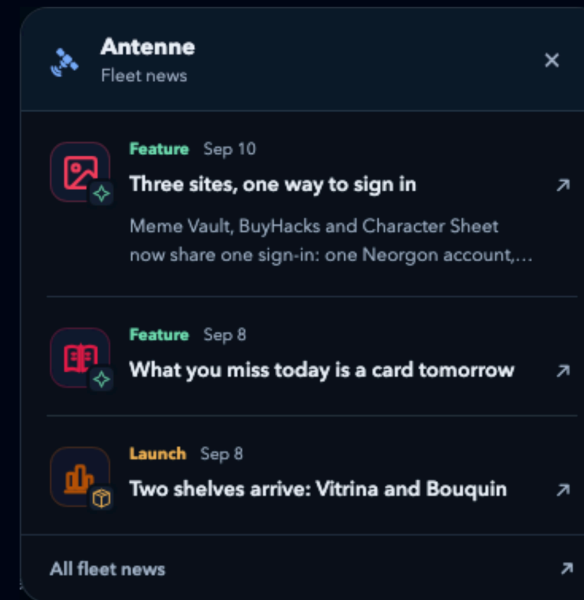

Antenne finds its place in the catalog

The same published stories, rendered with local tool artwork.

Before

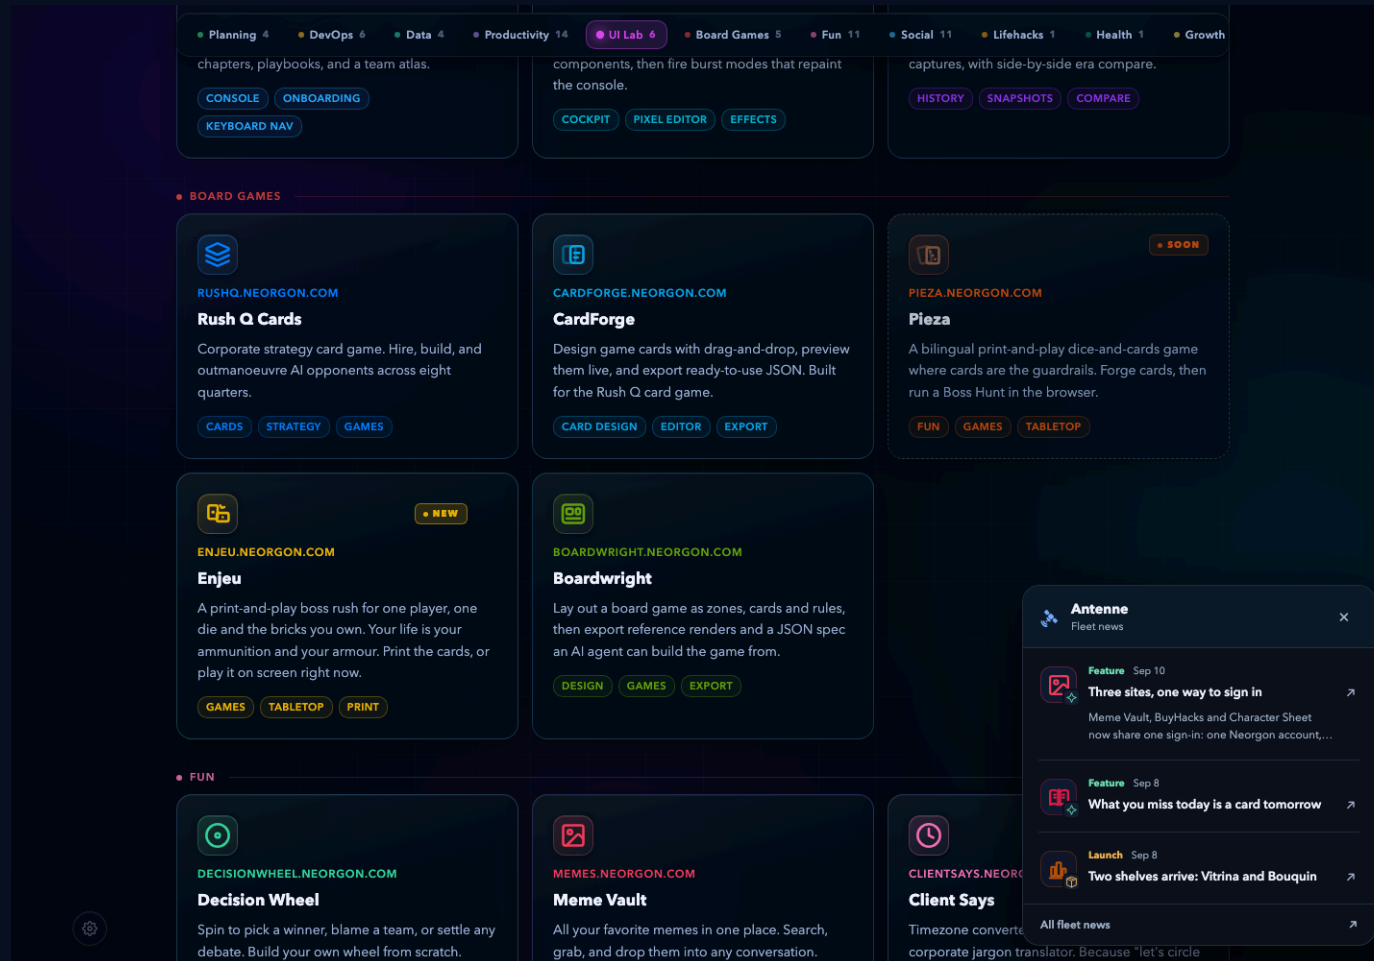

After

Local browser captures · September 20, 2026 · Static icons with update-type badges

The catalog gains clearer boundaries

A bulletin must behave like part of the page

One feed, native links, keyboard dismissal

The hub now owns the small news view

Before

- Fetch the feed, then load an iframe
- Remember only the newest publication date

After

- Render three stories from the fetched feed
- Remember story IDs and dates
- Return focus when dismissing

Checks cover failure states as well as appearance

- Repository icon, count and preview checks pass
- Dismiss, reopen and same-day updates verified
- Malformed feeds and unavailable storage exercised
- Long titles and narrow viewports checked

The smaller view has maintenance costs

- New story kinds need a renderer update
- Multi-tool stories show one matching icon
- Legacy dismissals can reopen once

Live deployment remains open

- Production feed and CORS still need a check
- No user study or speed benchmark recorded
- Existing GIF coverage gaps remain

Review the page and the model-review draft

→ Open the local preview

Compare the captures, then decide when to publish.
