

The visual pass left three usability gaps

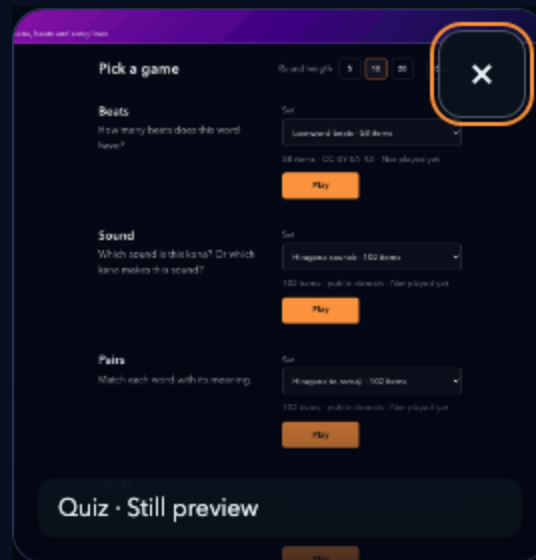

Three priorities, implemented in order

Neorgon

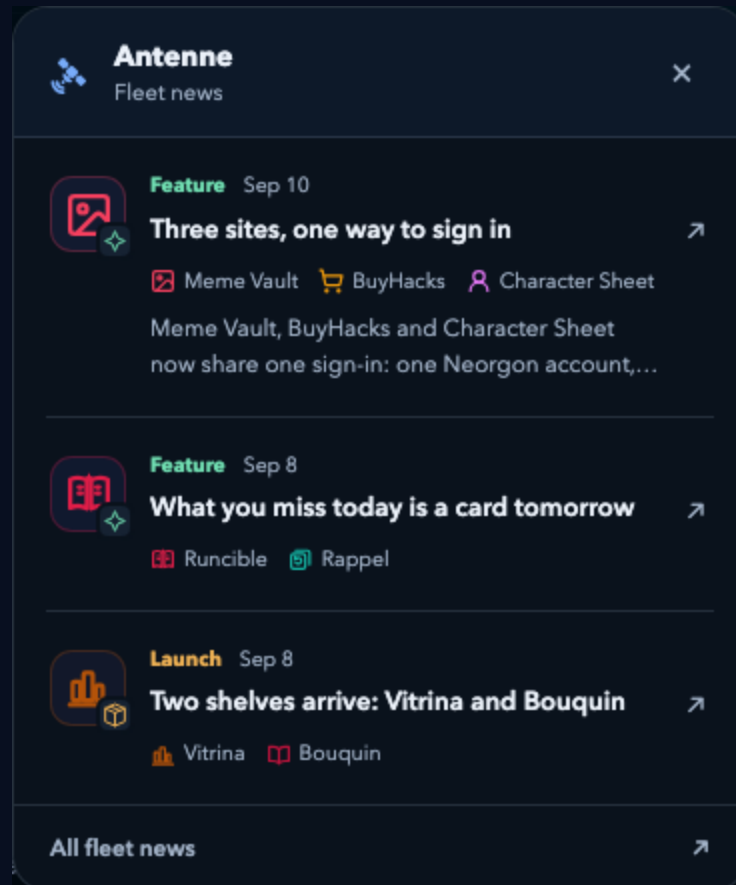

News is one tap away on phones

Previews work with keys, touch, and reduced motion

Each linked tool has a name and an icon

Both browsers pass the behavior checks

- 56 bulletin assertions in Chromium and WebKit
- 28 preview assertions in each browser
- Repository icon, count and preview checks pass
- Mobile and desktop captures visually inspected

The remaining costs are explicit

- Still previews currently download the source GIF
- Unrecognized story kinds need renderer support
- Existing preview gaps remain
- Manual screen-reader review is still open
